CSCC11 Bonus Worksheet A3 Survey

Q1 Does A3 help you have a deeper understanding of the Neural Networks and Unsupervised Learning topics? If yes, which question helps the most? If Not, please advise how to improve it. Thanks!

Yes

The PLA Question for both math derivation part and programming part.

It connect two things with a really detailed introduction in the real world, which is really helpful!

Q2 Please suggest how you would like me to improve your learning experiences. For example, do you like to have a course project? Do you want to learn more about how to use an existing machine learning library or you prefer implementing algorithms from scratch by yourself? Do you like having labs on a regular basis to reinforce your learning? Any input will be well appreciated. Thank you!

Short lab for each topic would be helpful for practicing programming. And also, if we can be taught & practice more questions (i.e. problem set questions) on tutorial, it would be better.
