

Bfs: How to find the shortest path?

Find the processor for each one

$O(N+M)$

→ line 8 enqueues

→ line 8 runs if line 7 condition is true,

so only if V is not seen

→ line 9 immediately marks V seen

⇒ Therefore, V is enqueued once.

line 6: edge $\{u, v\}$ } ⇒ $2m$ times

$u: \dots v \dots$
 $v: \dots u \dots$

consider
⇒ twice (for undirected graph).

⇒ Total time for Bfs: $\Theta(\underbrace{|V|}_n + \underbrace{|E|}_{2m})$.

Dfs:

final time ⇒ $2 \cdot |V|$
